

**1 BARWON HEADS - 13TH BEACH S.L.S.C TO 33W (SIGNPOST) BEACH CAR PARK**

Establish a 2.0m wide unsealed constructed pathway on the inland side of Thirteenth Beach Road from 33W (Signpost) beach car park to the S.L.S.C. ie. inside the existing road edge fence.

The 450 m long trail will require the construction of a timber retaining wall on the inland side of the trail for about 300m to minimise the amount of vegetation disturbance required.

**2 STEPHENS PARADE TO 33W (SIGNPOST) BEACH CAR PARK**

Establish a 2.0m wide unsealed constructed pathway from the western end of Stephens Parade to 33W (Signpost) beach car park. The proposed route will generally follow an existing informal track with deviations around patches of established Coastal Beard Heath.

The pathway will utilise the existing vehicle access track used for maintenance works to the electricity pole within the coastal dune, thereby reducing the impact on coastal vegetation along the sand dune ridge.

**3 ACCESS TO 32W (BEACON) BEACH CAR PARK**

This 1.2m wide bush track is proposed to provide a single track for access to 32W (Beacon) beach car park to replace the several existing informal tracks across the coastal reserve from Stephens Parade. Those existing tracks will be closed and rehabilitated.

The bush track will include two small sets of steps to assist in traversing the steep grades in this location. Beside the steps, a shallow "V" ramp will be constructed to enable a bicycle to be wheeled up the gradient.
